## Shale Gas Solution

### Sichuan Gulin Shale Gas Plant, China

Due to its location in the mountains and mountains, it is inconvenient to repair the gas pipeline, so the LNG factory can only be built on the spot, and the shale gas is liquefied and transported by LNG vehicles. Eight sets of 400kW containerized natural gas generator sets are used in parallel operation, with a total power of 3.2MW. They operate in isolated islands to provide power for the operation of all equipment in the plant area.

#### Key technical data

Fuel	Natural gas
Unit Model	8×K38
Power	3200KW
Commissioning	2016
